

# Presentation Prompter Release Notes

## Version 5.2

Released February 20, 2014

- Improves scrolling performance on OS X 10.9 Mavericks.
- Improves scrolling performance on Retina displays.
- Improves the speed when changing between Prompt and Edit mode.
- Adds support for 3+ screen configurations. Other screens can now do system video mirroring of screen 2 provided your Mac can drive 3+ displays.
- Changes the first 10 bookmarks so their menu shortcuts are Command-Number instead of Command-Control-Number.
- Fixes bookmark previous/next sometimes not working in Edit mode.
- Fixes issues where the prompter might display fragments of a line over other content.
- Fixes an issue that prevented entering Prompt mode.
- Fixes an issue where a visible scroll bar might result in the talent's script moving slightly when changing modes.
- Fixes a drawing issue while prompting on certain Macs running OS X 10.6 Snow Leopard.
- Fixes windowed prompting permitting documents to be opened, edited, and saved.
- Fixes a rare issue where turning on the Talent screen might make windows on the main screen needlessly center.
- Fixes a rare issue where the Talent screen might overlap content on the main screen.
- Fixes spell check, grammar check, and smart copy/paste so their states are remembered and applied to new documents.
- Fixes an issue where the Preview window might move between launches.
- Fixes an issue where the Color panel might move between launches.
- Fixes the preview toolbar button being enabled when comparing file versions.
- Fixes the style control being scrollable when it should not be in the general preferences window.
- Fixes the plain text encoding control not enabling the "Reset" button when changed in the general preferences window.
- Fixes and improves other small issues.
